To whom it may concern:
Aegis Softtech

Reference for Aegis Softtech

Aegis Softtech has been a trusted technology partner to WSP for more than four years.

WSP is a leading engineering, professional services, and infrastructure solutions firm with operations in Canada and around the world. We engaged Aegis Softtech to develop a Stakeholder & Team Management application tailored to our business requirements.

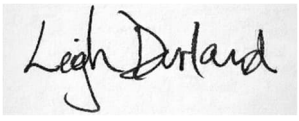
What began as an application development project has grown into a long-term partnership. Aegis worked with us from the initial concept through development and deployment, helping advance the application into a market-ready solution. The application is built using Microsoft .NET, SQL Server, and VB.NET, requiring the team to understand and manage a range of technologies and technical complexities.

Throughout the engagement, the Aegis team has consistently demonstrated strong technical expertise, professionalism, and a practical approach to problem-solving. They understand the complexities of the technology, respond effectively to challenges, and remain flexible when requirements evolve, or an issue requires additional attention.

We particularly value their willingness to go the extra mile when needed. They have proven dependable, responsive, and committed to delivering work properly and supporting the solution over the long term.

Based on our experience, we are pleased to recommend Aegis Softtech to organizations seeking a reliable and experienced Microsoft .NET development partner.

Sincerely,



Leigh Durland
